# KUMHO SAN

(Styrene-acrylonitrile)

## 1. Product Introduction

As copolymers of styrene and acrylonitrile, Kumho SAN has excellent chemical resistance, transparency, heat resistance, processability and mechanical properties.

Kumho SAN is suitable for use in electric and electronic equipments, office applications, automobile parts, electric fans, disposable lighters and various containers.

Kumho SAN has various grades of high flow, high transparency, high heat resistance, high rigidity and high chemical resistance. Grades are classified in accordance with processing scheme, such as composition and molecular weight of styrene and acrylonitrile.

## 2. Characteristics & Applications

SAN 350	High strength	Flow-meter case, Electric & electronic parts
SAN 350HW	Super high strength	Disposable lighter, Electric fan, Electronic parts

## 3. Handling Precautions

- Keep away from fire : Styrene-acrylonitrile copolymer is flammable.
- Wear protective gear when handling. San produces toxic fumes, such as carbon monoxide, when burned or heated.
- If spilled, replace in its container, and if skin or eye contact occurs, wash off with water.
- In case of fire, wear protective gear including a gas mask, since toxic fumes, such as carbon monoxide, are produced when SAN is burned.
